TOTAL LOAD CHECK WITH BPW'S NEW AXLE LOAD PRESSURE GAUGE

BPW is offering an improved design of its tried and tested axle load pressure gauge for customers who want to have total control over their vehicle's loading.

Partially filled with silicone oil, in order to damp the display needle, the axle load pressure gauge displays the axle load on a scale based on the pressure in the air bags. The actual trailer axle load can be read off the appropriate scale. The scale used is dependent on the relative spring dimensions in front of and behind the axle.

The gauge gives customers a clear and sufficiently accurate indication of the load condition. In addition, the straightforward display saves time during loading and unloading as there is no need for vehicles to be weighed separately.

Available for 300mm and 360mm air bags, BPW's axle load pressure gauge can also be retrofitted. The complete set comprises of pressure gauge, screw connection, stop cock and installation diagram. For further details contact BPW on 0116 281 6100.
