## DIGITAL ECOMETER

BPW has developed a **digital** ECOMeter which will be available from July 2005 onwards. It is a hub cap incorporating a digitally displayed distance recording.

The display is simply activated and once it has been set to a particular tyre rolling circumference it cannot be further tampered with. It gives a clear and precise reading of the distance travelled on an illuminated display.

The compact electronic components, as well as the display PCB, are fixed inside the water-tight hub cap where they are protected against damage.
