BPW's world leading hub systems

A name you can trust

BPW Disc Brake with ECO Air COMPACT Suspension and ECO Plus 3 Hub system

The ground-breaking development of BPW's ECO Hub system has had a major effect on running gear technology.

With over 2 million models sold, the ECO Hub offers numerous low maintenance features. The latest development of this world-leading hub system is ECO Plus 3.

ECO Plus 3 is based on the successful ECO Hub system with design features that include DIN ISO tapered roller bearings. These can be readily inspected, regreased and repacked, are globally available and can, if required, be replaced easily and inexpensively without having to fit a complete new hub.

To ensure correct fitment, the hub is designed with an integrated torque limiting hub nut. This single threaded nut follows the Formula 1 principle with the nut acting as a puller. It allows simple removal of the entire wheel and hub, including the brake drum and bearings. Brake servicing/maintenance times are therefore considerably reduced.

The new circumferential hub design, with open spokes, provides improved thermal management for the bearings and lubricant whilst the new grease seal offers optimum protection and performance. The ECO Hub comes with a five-year unlimited mileage warranty for on-road applications.

ECO Plus 3 Hub unit

Like its predecessor, ECO Plus 3 is designed specifically for the high duty cycles of modern transport operation. It's a robust, reliable system designed for a long service life.

BPW quality and reliability

Renowned durability and performance

Features

- Proven hub bearing technology
- Standard DIN taper roller bearings
- Optimised hub thermal management
- Available with drum and disc

Benefits

- Central nut with integrated hub puller
- Service friendly
- ECO seal - optimum protection and performance
- BPW-backed warranty

ECO Plus 3 Hub with Drum Brake

Warranty

- 5 year unlimited mileage for on-road vehicles
- 3 years for off-road vehicles

BPW Guaranteed Support

Our commitment to upholding the highest levels of quality across our brand extends to the technical support and training provided by our Customer Services Department. This is a further testament to the long-term reliability of our products and sets us apart from the competition.

Engineering Services

We are happy to provide advice and work together to develop the solution that's right for you. As part of a fully integrated service, our experienced specialists provide a broad range of engineering services to support your manufacturing operations. From application consultation to brake calculations, a total installation package can be delivered directly to the workshop floor.
