

SELF-STEER AXLE

1. Standard self-steer up to 20° of steer, normally preset to 12° for standard trailers.
2. Patented and proven load dependent steering design utilising undulating washers. Self damping. Adjusts automatically to any load.
3. Unique reverse lock feature which is activated via the undulating washer design. (No need to align tractor and trailer for reversing).

4. Patented 3D trailing arm, allowing straight main frame design. (with super single tyres).
5. Increased manoeuvrability, reduced tyre wear.
6. Available for disc and drum brake applications.
7. Special self-steer axles are also available with 27° of steer. (for super single tyres) (straight frame chassis design).
8. Self-steer axles are also available for 17.5" and 19.5" twin tyres. (drum brakes)

COMMAND STEER

- Full range of Ackermann Command steer-axles available, together with rigid axle and turntable options.
- Turntables also supplied. (Double ball race).
